

Install-Package Microsoft.AspNet.WebApi.Cors

Install-Package Microsoft.Owin.Cors

In **Web.config**:

```
<appSettings>
  <add key="cors:Origins" value="*" />
  <add key="cors:Headers" value="*" />
  <add key="cors:Methods" value="GET, POST, OPTIONS, PUT, DELETE" />
</appSettings>
```

In **Startup.cs AT THE TOP**:

```
NameValueCollection appSettings = WebConfigurationManager.AppSettings;

if (!string.IsNullOrEmpty(appSettings["cors:Origins"]))
{
    var corsPolicy = new EnableCorsAttribute(
        appSettings["cors:Origins"],
        appSettings["cors:Headers"],
        appSettings["cors:Methods"]
    );

    app.UseCors(new CorsOptions
    {
        PolicyProvider = new CorsPolicyProvider
        {
            PolicyResolver = request =>
                (request.Path.Value == "/token" OR ANY PATH FOR LOGIN) ?
                    corsPolicy.GetCorsPolicyAsync(null, CancellationToken.None):
                    Task.FromResult<CorsPolicy>(null)
        }
    });
});
```

In **WebConfig.cs -> Register method AT THE TOP**:

```
NameValueCollection appSettings = WebConfigurationManager.AppSettings;

if (!string.IsNullOrEmpty(appSettings["cors:Origins"]))
{
    var corsPolicy = new EnableCorsAttribute(
        appSettings["cors:Origins"],
        appSettings["cors:Headers"],
        appSettings["cors:Methods"]
    );

    config.EnableCors(corsPolicy);
}
```
